

Sara Taylor Eggleston, MA, CDMS, LPC

Ergonomics & Disability Management Specialist

Fields of Competence

Human Factors / Ergonomics

Provide consulting in wellness, ergonomics, wheelchair fitting and coordination, job analysis and accommodation; implement services; and provide training to create a healthier and more functional individual and workforce.

Disability Management Assessments

Assess return to work, risk management, safety, and claim files to complete current state assessments; identify disability management needs; facilitate corporate commitment; develop programs; and measure results with successful implementation.

Experience Summary

Ms. Eggleston has been a consultant since 1986 in the prevention and management of disability. Initially entering the field in rehabilitation counseling, she recognized the opportunity for employers to take control, and hence, greatly reduce the human and financial costs of disability.

Since establishing her practice in 1996, she has worked with thousands of individuals with disabilities in home, office, and industrial settings to address ergonomic seating, activities of daily living, and job functions to optimize comfort and function.

Master of Arts – Rehabilitation Counseling, Michigan State University, 1991

Bachelor of Science – Criminal Justice, Western Michigan University, 1985

**Certified Disability Management Specialist (CDMS)
Licensed Professional Counselor (LPC)**

Key Projects

Serviced over 2,500 individuals in multiple environments and organizations with individualized ergonomic assessments to improve function, health, and prevent disability.

Provided group and individualized training to empower employees on how to safely perform their work, change work habits and postures, and modify their work environments.

Maintain an over 95 percent success rate in employees reporting reduced or eliminated systems as a result of participating in ergonomic assessments and a 98 percent success rate in improved employee comfort.

Created client specific early reporting strategies to prevent symptomatic employees from becoming disabled.

Coordinated and trained office product and furniture suppliers to positively interface with corporate ergonomic service providers, employees, and contracted vendors.

Reviewed proposed architectural and interior designs to ensure the finished plans result in healthy work environments.

Provided train-the-trainer workshops for clients to enhance internal ergonomics, facility management, purchasing decisions, and fitness services. Training included workstation design, end-user ergonomic training, disability accommodation, internal assessments, documentation, and product selection.

Consulted with manufacturing customers to develop disability management programs. For one client, reduced direct workers' compensation costs from 6 to 3 percent of payroll.

Developed programs and procedures that resulted in 90 percent reduction in lost time and costs for client employers.

Established procedures for corporate rehabilitation program to transition internal and community placement of permanently restricted employees. Resulted in

90% employee retention and 100% case resolution.
